

# New Colors & Materials

## A Look at the Latest Offerings

*With so many companies now offering surfacing materials, it's a difficult task to keep up on what new colors and new materials are hitting the scene. Whether it's solid surface, quartz, concrete, natural stone or any number of other surfacing materials, there is a lot happening. That's why we gathered as much as we could on just what the manufacturers are up to. Of course, it's impossible to include everything, but we gave it our best go...*

### Cosentino

Silestone by Cosentino has added a variety of new colors to its product line up. These new colors include: Rosso Monza, a vibrant,

juicy red shade; White Platinum, a stark hue with vibrant flecks of silver; and Cemento, a sophisticated tarmac gray. Additionally, Silestone has expanded its best selling color, White Zeus, with the launch of White Zeus Extreme, the whitest white for a stark, contemporary look.

The company has also introduced two new series of colors, the Galactic Series and the Nebula Series. The Galactic Series is for those who enjoy nature-inspired décor and includes the following colors: Black Dragon, a black hue; Seleno, white with speckles; Giallo Nova, a dusty brown; Halley, pebbled cream; Kimbler, a mottled brown; Quasar, cream and gray tones; and Seleno, a light cream with brown flecks.

The aesthetic of the new Nebula Series creates movement through veining and depth. Utilizing the latest quartz manufacturing technologies to morph color combinations, Nebula has a marble like finish. The Series is comprised of six colors: Altair, Cygnus, Doradus, Lagoon, Lyra and Merope. These deep base colors are distinctive, providing uniformity of veins throughout the surface, and earthy tones of celestial rocks.

The Nebula Colors are available in a polished finish. *Circle Reader Service #15 on the Reader Service Page or go to [www.isfanow.org/info](http://www.isfanow.org/info).*
